SUMMARY

Aspiring Software Developer with hands-on experience building web applications and AI-based solutions using Python, Flask, Django, React, FastAPI, MySQL, and MongoDB. Strong interest in backend development, API integration, data handling, and clean code practices. Skilled in developing responsive interfaces, designing project-based solutions, and solving problems through practical implementation and continuous learning.

EDUCATION

- Sagar Institute of Science Technology and Research | Bhopal, Madhya Pradesh**
 - Bachelor of Technology in Computer Science and Engineering | CGPA: 7.43 | 2023 - 2027
- Tapeshwari Kunwar High School Dosma | Aurangabad, Bihar**
 - ISC | 2021 – 2023
 - Received the Best Student Award for academic excellence.
- Bright Life Public School | Rafiganj, Aurangabad, Bihar**
 - Secondary Education | 2019 - 2021

SKILLS

Languages: Python, C, C++, JavaScript, HTML, CSS

Frameworks: Flask, Django, FastAPI, React

Databases: MySQL, MongoDB

Libraries and Tools: NumPy, Pandas, Matplotlib, OpenCV, TensorFlow, Keras, Git, Google Colab

Core Areas: Backend Development, REST APIs, Web Development, Machine Learning, Data Analysis

PROJECTS

Spend Smart - Expense Management Application | <https://spend-smart-tawny-xi.vercel.app/>

Tech Stack: React, JavaScript, HTML, CSS, Node.js, Express.js, MongoDB

- Built a full-stack expense management application to track daily income and expenses through a responsive dashboard.
- Implemented CRUD operations and database integration for secure and efficient transaction management.
- Designed interactive UI components such as forms, transaction tables, and summary views for better usability.

AI Data Analyst Dashboard

Tech Stack: Python, FastAPI, React, JavaScript, Pandas, NumPy, Matplotlib, MySQL

- Developed an AI-powered dashboard for uploading, analyzing, and visualizing datasets efficiently.
- Built FastAPI-based backend APIs for data processing, chart generation, and report-oriented insights.
- Used Pandas and NumPy for data cleaning, transformation, and analytical workflows to support decision-making.

FoodScanAI - Food Spoilage Detection System

Tech Stack: Python, TensorFlow, Keras, OpenCV, NumPy, Pandas, Matplotlib, Google Colab

- Built a deep learning-based image classification system to detect whether food items are fresh or spoiled.
- Developed and trained a CNN model using preprocessed image datasets for spoilage prediction.
- Evaluated model performance through accuracy analysis, preprocessing pipelines, and visual result reporting.

CERTIFICATIONS

AWS Foundations: Machine Learning Basics | AWS Cloud Practitioner Essentials | Git Training | Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate | Python Essentials 1 and 2 | Introduction to Modern AI
