## PROFESSIONAL SUMMARY

B.Tech student in Computer Science Engineering (AI & ML), graduating in 2027, seeking an entry-level AI/ML Engineer role. Built a CNN-based image classifier and an LLM-powered interview platform in Python, with backend experience in FastAPI and Flask. Completed an AICTE x IBM SkillsBuild virtual internship in applied machine learning.

## TECHNICAL SKILLS

|                                  |                                                                                                                                                                               |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages:           | Python, C++, SQL, JavaScript                                                                                                                                                  |
| AI and Machine Learning:         | Machine Learning, Deep Learning, Computer Vision, Convolutional Neural Networks (CNNs), Generative AI, LLM Integration, Reinforcement Learning, Model Training and Evaluation |
| ML/DL Libraries and Frameworks:  | TensorFlow, Keras, PyTorch, scikit-learn, OpenCV                                                                                                                              |
| Data Analysis and Visualization: | NumPy, Pandas, Matplotlib                                                                                                                                                     |
| Backend Development and APIs:    | FastAPI, Flask, Django, REST APIs, JWT Authentication, Docker                                                                                                                 |
| Databases:                       | MySQL, MongoDB                                                                                                                                                                |
| Frontend Technologies:           | React, JavaScript                                                                                                                                                             |

## EDUCATION

|                                                            |             |
|------------------------------------------------------------|-------------|
| B.Tech in Computer Science Engineering (AI & ML)           | 2023 – 2027 |
| Sagar Institute of Science Technology and Research, Bhopal |             |
| Class XII                                                  | 2021 – 2023 |
| Tapeshwari Kunwar High School, Dosma, Aurangabad, Bihar    |             |
| Class X                                                    | 2019 – 2021 |
| Bright Life Public School, Aurangabad, Bihar               |             |

## EXPERIENCE

|                                                                      |                              |
|----------------------------------------------------------------------|------------------------------|
| Machine Learning and Applied AI Intern                               | August 2026 – September 2026 |
| BharatCares — AICTE x IBM SkillsBuild   Virtual Internship (6 weeks) |                              |

- Completed a structured applied machine learning program delivered through expert-led masterclasses and mentorship.
- Studied supervised learning (regression, classification, decision trees), unsupervised learning, and deep learning; explored reinforcement learning, including Q-Learning and AI agents, through interactive simulations.
- Built and evaluated machine learning models in guided sessions; completed the final project, FreshLens-AI.

## PROJECTS

### AI InterviewBuddy

**Tech Stack:** Python, FastAPI, React, MongoDB, LLM Integration, JWT, Docker

- Developed a FastAPI-based interview preparation platform that generates role-specific questions using LLM integration.
- Extracted role, experience, projects, and skills from uploaded resumes to provide personalized feedback.
- Implemented JWT-based authentication with email OTP verification through Gmail SMTP.
- Built a React frontend with dashboard, interview, resume, jobs, and insights modules.
- Containerized the application with Docker and used MongoDB for data storage.

### FreshLens-AI — Food Spoilage Detection System

AICTE x IBM SkillsBuild Final Project

**Tech Stack:** Python, TensorFlow, Keras, OpenCV, NumPy, Pandas, Matplotlib, CNN, Flask

- Built a TensorFlow/Keras CNN to classify food images as fresh or spoiled, with OpenCV image preprocessing.
- Used NumPy, Pandas, and Matplotlib for data handling and model evaluation.
- Integrated the trained model into a Flask web application for image-based predictions.

## CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle
- Artificial Intelligence / Machine Learning — IBM SkillsBuild
- AWS Foundations: Machine Learning Basics — AWS
- AWS Cloud Practitioner Essentials — AWS
- Cisco Python Essentials 1 & 2 — Cisco
